EXPERIENCE

Software Development Engineer

Aug 2025 – Present

Amber

Pune

- Re-architected the support-AI orchestration layer from LangGraph to the OpenAI Responses API, cutting LLM calls by ~60% and enabling persistent memory, prompt caching, and tighter context management.
- Drove latency work (~12s→7s) by restructuring the pipeline to run independent nodes concurrently (extraction, tagging, summary, intent) and removing redundant processing.
- Built the AI's inventory-search + recommendation tooling — search tool, preference capture, and a constraint-relaxation strategy for near-matches when exact results are sparse — contributing to a 71% CSAT on AI-handled conversations.
- Built full-stack whitelabel personalization (Rails + React) — per-partner custom pages, branding, and partner-specific accommodation discovery.

Software Engineer Intern

July 2024 – June 2025

Cleartrip (Flipkart)

Bangalore

- Developed and optimized flight filters (One-way price, Trip duration, Layover duration) using Java, Spring Boot, and REST APIs, reducing search latency and enhancing Cleartrip for Work UX.
- Fixed a production pricing bug that led to Rs.40L revenue loss due to Rs.0 convenience fees, restoring billing accuracy by patching transactional flows.
- Led resolution of SEV-0 production outages during on-call; collaborated cross-functionally to mitigate impact quickly.

PROJECTS

Skill Quest *Java Spring Boot, FastAPI, React, GPT-5.6 Luna, text-embedding-3-small*

- Architected an AI resume-ranker as an orchestrator + specialized sub-agents (extraction, embedding-based skill matching, assessment, verification), moving scoring out of the LLM into deterministic, auditable embedding similarity.
- Built a Spring Boot backend (Tika multi-format parsing, secure upload/download, PDF reports) and a FastAPI ML service (GPT-5.6 Luna extraction, text-embedding-3-small matching, async concurrency, LRU caching).
- Built an eval harness measuring ranking correlation (Kendall's tau/NDCG), skill-match precision/recall, and score stability - to validate model and prompt changes plus a prompt-injection guardrail for untrusted resume input.
- Built a retro-themed React frontend with a ranked leaderboard, per-skill match explainability, and downloadable reports.

CodeWeave *React, Socket.io, WebSockets, Monaco*

- Built a real-time collaborative code editor for interviews and pair programming, syncing multi-user edits over WebSockets.
- Integrated the Monaco editor for IDE-like editing and the Wandbox API for multi-language compilation and execution.
- Implemented Socket.io for low-latency room sync and session management across concurrent users.

EDUCATION

Chitkara University

Oct 2021 – July 2025

Bachelor of Engineering in Computer Science – 9.10 / 10

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, SQL, C/C++

AI/ML: LLM orchestration (OpenAI Responses API, LangGraph), embeddings/semantic search, LangSmith, evals, guardrails

Frameworks: Spring Boot, React, Node/Express

Tools: PostgreSQL, AWS, GCP, Git, Github

Concepts: REST APIs, Microservices, CI/CD, Observability

CERTIFICATIONS

McKinsey.org Forward Program

Google Cloud Computing Foundations Pathway – Google

Career Essentials in Generative AI – Microsoft and LinkedIn

LEADERSHIP & CAMPUS ENGAGEMENT

Design Lead - GDSC: Led branding and graphic design for campus-wide tech events.

Event Coordinator – GDSC: Organized hackathons (OctaHacks) and workshops (Tenet).
